RAG TEST KNOWLEDGE BASE

A synthetic PDF for testing document ingestion, chunking, retrieval, citations, and question answering

Document ID: KB-ORBIT-001
Version: 1.2
Published: 23 October 2026
Organization: OrbitDesk (fictional)

This document contains intentionally fictional company policies, product facts, numeric tables, exceptions, and cross-section references. Use it to evaluate whether your RAG pipeline retrieves the right passages and answers only from evidence.

Important: OrbitDesk, its products, people, prices, and policies are fictional. Do not treat this file as real-world guidance.

1. Organization Overview

OrbitDesk is a fictional software company that makes collaboration tools for small teams. Its three products are Orbit Notes, Orbit Tasks, and Orbit Vault. The company's support team operates Monday through Friday, 09:00–17:00 UTC, excluding the annual maintenance day described in Section 6.

Product catalog

Product	Purpose	Standard plan price	Default storage
Orbit Notes	Shared notes and searchable meeting summaries	$6 per user/month	10 GB per workspace
Orbit Tasks	Task boards, assignments, and reminders	$9 per user/month	5 GB per workspace
Orbit Vault	Encrypted file storage and access controls	$12 per user/month	100 GB per workspace

Plan prices are per user per month before any applicable tax. Annual billing, discounts, and custom enterprise quotes are not included in the table.

Company facts

- Headquarters: Northbridge (fictional city).
- Founded: 2021.
- Employee count in this fictional dataset: 84.
- Support ticket reference prefix: OD-.
- The company's internal currency for invoices is USD.

Product capability details

Orbit Notes: supports full-text search and exports to PDF or Markdown. It does not provide encrypted file storage as a standalone feature.
Orbit Tasks: supports recurring tasks, due dates, and CSV export. It does not include meeting transcription.
Orbit Vault: encrypts stored files and supports expiring share links. It does not include task boards.

2. Account and Security Policies

Password and multi-factor authentication

Passwords must contain at least 12 characters. OrbitDesk recommends passphrases and does not require a symbol if the minimum length and other account controls are satisfied. Multi-factor authentication (MFA) is mandatory for workspace administrators and optional, but strongly recommended, for regular members.

Session rules

A session expires after 30 days of inactivity. If an administrator resets a member’s password, that member’s active sessions are revoked within 5 minutes. A user can request a session revocation from the Security page; the request normally completes within 1 minute.

Data retention

Deleted workspace files remain in a recoverable trash area for 14 calendar days. After the retention period, files are permanently deleted during the next scheduled cleanup, which runs daily at 02:00 UTC. A workspace owner can restore a file during the 14-day period. Restoring a file does not restore a share link that has already expired.

Security incident reporting

Suspected account compromise should be reported through security@orbitdesk.example. The security team acknowledges reports within 4 business hours. The acknowledgement target is not a guarantee that the incident will be fully resolved within that period. Include the workspace ID and approximate time of the event; never email a password or MFA recovery code.

Exception: emergency access

If the workspace owner loses access to their MFA device, they must use the account recovery form and provide two approved identity checks. Support agents cannot disable MFA solely on the basis of a chat request. Recovery usually takes 1–2 business days after all required information is received.

3. Support, Billing, and Refunds

Support priority targets

Priority	Example	Initial response target
P1 — Critical	Entire workspace unavailable for multiple customers	1 business hour
P2 — High	A core feature fails for one workspace with no workaround	4 business hours
P3 — Normal	A non-critical bug or a question about configuration	2 business days
P4 — Low	Feature request or cosmetic issue	5 business days

Response targets refer to the first human response during support operating hours. They are targets, not guaranteed resolution times. A ticket submitted outside operating hours is considered received at the next opening time.

Billing rules

Invoices are issued on the first calendar day of each billing month. Payment is due within 15 calendar days of invoice issuance. If payment is overdue by 7 days, the account owner receives a reminder. If payment is overdue by 21 days, the workspace enters read-only mode. Read-only mode prevents new edits and uploads but allows existing data to be viewed and exported. Service restoration normally occurs within 2 hours after the outstanding balance is recorded as paid.

Refund rules

A customer may request a refund for a first-time subscription purchase within 10 calendar days of the initial charge. Renewal charges are not normally refundable. Duplicate charges are eligible for review regardless of subscription age, provided the customer supplies both transaction references. Refund requests are reviewed within 5 business days; approval is not automatic.

Plan change example

A team has 8 Orbit Tasks users. The standard monthly subscription subtotal is 8 × $9 = $72 before tax. If two users are removed before the next billing date, the next month’s standard subtotal becomes 6 × $9 = $54. This example does not describe mid-cycle prorating; the fictional policy does not specify a proration formula.

4. Service Reliability and Technical Facts

Availability objectives

OrbitDesk's stated monthly availability objective is 99.5% for Orbit Notes, 99.7% for Orbit Tasks, and 99.9% for Orbit Vault. These are service objectives in this synthetic dataset, not a promise of compensation. Scheduled maintenance announced at least 72 hours in advance is excluded from the monthly availability calculation.

API limits

API category	Limit per workspace	Window
Read endpoints	600 requests	Per minute
Write endpoints	120 requests	Per minute
File upload initiation	30 requests	Per minute

When a workspace exceeds a limit, the API returns HTTP 429 and includes a Retry-After header. Clients should wait for the specified interval before retrying. The limit is per workspace, not per individual user. The API documentation in this dataset does not define burst capacity.

Export behavior

Orbit Notes exports Markdown and PDF. Orbit Tasks exports CSV. Orbit Vault can download stored files in their original uploaded format; it does not convert files to PDF. Bulk export jobs larger than 2 GB are queued and may take up to 6 hours to become available. Smaller exports are normally available within 10 minutes.

Known limitations

- Search indexing can take up to 3 minutes after a note is edited.
- CSV exports from Orbit Tasks use UTC timestamps in ISO 8601 format.
- Expiring Orbit Vault share links cannot be reactivated; a new link must be created.
- The API has no documented endpoint for changing a workspace's billing currency.

5. Team Directory and Internal Workflow

Fictional team directory

Name	Role	Team	Escalation area
Mina Patel	Support Lead	Customer Support	P1/P2 ticket coordination
Jonas Reed	Security Engineer	Security	Account compromise and MFA
Lena Okafor	Billing Specialist	Finance Operations	Invoices and refund review
Arun Das	Platform Engineer	Engineering	API limits and availability

Workflow: compromised account

1. The customer reports the issue to security@orbitdesk.example and includes the workspace ID and approximate event time.
2. Customer Support creates a ticket with a reference beginning OD-.
3. The Security team reviews access logs and may revoke sessions.
4. If the owner has lost their MFA device, the owner follows the recovery process in Section 2; a support agent must not bypass it.
5. Support communicates status updates, but the 4-business-hour acknowledgement target should not be described as a resolution guarantee.

Workflow: billing dispute

1. The customer supplies the invoice number and relevant transaction reference(s).
2. Finance Operations checks whether the case is a first-time purchase, renewal, or duplicate charge.
3. Refund eligibility is assessed using the rules in Section 3.
4. The customer is told that review takes up to 5 business days and that approval is not automatic.

Cross-section rule

If a customer reports both a suspected account compromise and an overdue invoice, security handling must follow Section 2 regardless of billing status. Read-only mode does not authorize staff to weaken MFA or skip identity checks.

6. Dates, Events, and Policy Boundaries

Annual maintenance day

OrbitDesk's fictional annual maintenance day is 15 December. Support is unavailable that day. The next support opening time is 09:00 UTC on the next weekday that is not separately designated as a closure. Maintenance announcements are normally sent at least 72 hours in advance.

Policy effective dates

- Account and security policies: effective 1 March 2026.
- Billing and refund policies: effective 1 June 2026.
- API limits in Section 4: effective 1 September 2026.
- This document version 1.2 was published 23 October 2026.

What this document does not say

This dataset does not specify tax rates, mid-cycle subscription proration, legal jurisdiction, data residency regions, exact burst limits for the API, or a guaranteed incident resolution time. If asked for one of these, a faithful answer should say the information is not provided rather than inventing a value.

Date interpretation example

A ticket submitted on Friday at 18:30 UTC is outside the stated support operating hours. It is considered received at the next opening time, which is Monday at 09:00 UTC unless Monday is a designated closure. If Monday is 15 December, the annual maintenance closure applies and the next eligible opening time is the next weekday that is not separately designated as a closure.

7. Evaluation Questions for Your RAG Pipeline

Use these questions after ingesting the PDF. The expected answers are intentionally not included here, so this section can serve as a benchmark prompt set. For each answer, check whether your system retrieves the supporting passage and avoids unsupported assumptions.

A. Direct retrieval

1. What is the monthly price of Orbit Vault per user?
2. How long are deleted files recoverable?
3. What is the API read-endpoint limit per workspace?
4. Who handles refund reviews?
5. What file formats can Orbit Notes export?

B. Multi-hop reasoning

6. A workspace has 10 Orbit Tasks users. What is its standard monthly subtotal before tax?
7. A customer reports a lost MFA device and asks support to disable MFA in chat. What should support do, and what is the usual recovery timeframe?
8. A customer has an overdue invoice by 22 days. What mode is the workspace in, and what can the customer still do?
9. A 3 GB Orbit Vault export is requested. What is the expected handling and possible wait time?
10. A customer reports a compromised account and an overdue invoice. Which process takes priority?

C. Comparison and precision

11. Compare the availability objectives for all three products.
12. What is the difference between the P1 and P3 initial response targets?
13. Which product supports recurring tasks, and which supports expiring share links?
14. How do password-reset session revocation and user-requested session revocation differ in timing?

D. Abstention tests — the answer is not specified

15. What exact tax rate is applied to subscriptions?
16. What is the precise mid-cycle proration formula?
17. What is the API burst capacity?
18. Which country’s laws govern the service?
19. What percentage chance is there that a refund will be approved?

E. Temporal and exception handling

20. When did the API limits in this document become effective?
21. Is support available on 15 December?
22. A ticket arrives Friday at 18:30 UTC. When is it considered received, assuming Monday is not a closure?
23. Can an expired Orbit Vault share link be reactivated?

F. Citation quality

24. Answer: “How long does refund review take?” Cite the exact supporting section.
25. Answer: “What happens after 21 days of overdue payment?” Cite the billing policy and distinguish access restrictions from data deletion.
26. Explain why the 4-business-hour security acknowledgement target must not be presented as a guaranteed resolution time.

8. Suggested Scoring Rubric

Dimension	What to check	Suggested sc
Retrieval accuracy	Did it retrieve the correct section or table row?	0–2
Factual correctness	Are names, numbers, units, and conditions correct?	0–2
Citation grounding	Does the cited passage actually support the answer?	0–2
Multi-hop reasoning	Does it combine sections without losing constraints?	0–2
Abstention	Does it admit when the PDF does not specify an answer?	0–2

Suggested total: 10 points per question set, or score each question individually. Include separate checks for correct abstention and source citation; a fluent answer without evidence should not receive full credit.

Recommended test workflow

1. Ingest the PDF and verify that every page is parsed.
2. Inspect chunk boundaries around tables, numbered workflows, and section headings.
3. Run the questions in Section 7 without giving the model this rubric.
4. Record retrieved chunk IDs, similarity scores, final answers, and citations.
5. Repeat with different chunk sizes, overlap, embedding models, and rerankers.
6. Add adversarial questions that combine a valid fact with an unsupported assumption.
